

DOMINIQUE DIERICKX

Principal Software Engineer · Software Architect
Building large-scale search, data and AI systems

CONTACT

dominiek.eu
dominique@do-jo.be
Ghent area, Belgium

EDUCATION

Master in Applied Computer Science

Vrije Universiteit Brussel ·
Great honor
2007 - 2009

Bachelor in Applied Computer Science

Hogeschool Gent · Honor
2004 - 2007

EXPERTISE

AI & Search: RAG, Agents,
MCP, OpenSearch
Architecture & technical
leadership
Kotlin, Java, TypeScript,
Python
AWS, Kubernetes, CI/CD,
security

LANGUAGES

Dutch (native)
English (fluent)
French (conversational)

EXPERIENCE

Fifteen-plus years into building software, I am rethinking how I build it: AI in the loop for prototyping, coding and validation, with the same curiosity I bring to building AI into products. What has not changed is sitting down with the team, figuring out the right thing to build and building it to last for the customers who use it and the engineers who maintain it.

Principal Software Engineer

SHOWPAD

2019 - PRESENT

- Designed and implemented the Showpad MCP server with my team, exposing platform content, search and AI capabilities to LLM agents
- Built content summarization and question-generation pipelines powering agentic RAG and content discoverability
- Own OpenSearch index design, migration and ongoing operation at production scale
- Designed ShowQL, an ANTLR-based query language for structured content filtering
- Drive security, monitoring and cost-efficient operation on AWS, including AI workloads: model selection, token budgets and caching to balance quality, latency and cost

Claude Code, TypeScript, Kotlin, Go, AWS, CDK, GitLab CI, OpenSearch

Application Architect

CEGEKA

2019

- Architected a new job-candidate-matching platform from inception to delivery
- Led requirements study, cost calculation and technical presentations for prospects

Java, Spring Boot, Kubernetes, OpenAPI, Elasticsearch

Software Architect & Engineer, Maps

TOMTOM

2011 - 2019

- Led the team designing an API-first map delivery platform, replacing a legacy system as the main entry point for map customers
- Contributed to unit-wide architecture decisions and guidelines
- Processed map data at scale for faster, higher-quality delivery
- Earlier R&D work on dynamic map data visualization and EU-funded routing projects

Java, Spring Boot, Kubernetes, Apache Hadoop, HBase, Avro
